

# Integrated Project Management

## Innovative Supply Chain Solutions

Our Integrated Project Management (IPM) teams deliver complex Supply Chain Management (SCM) solutions on an outsourced or collaborative basis.

With global experience and world-class processes and systems, we offer clients direct, integrated access to our technology and Project Management (PM) expertise.

We assist our clients with SCM solution design implementation, and operation.

Our integrated service offerings address every phase of the supply chain, from design to source to plan to build to distribute.

Our Supply Chain Management Services help clients address the full supply chain spectrum:

- Supply Chain Strategy** - we identify, quantify and assist in planning client supply chain transformation.
- Supply Chain Planning** - we help clients plan and manage supply and demand across their supply chain.
- Supply Chain Enterprise Applications** - we integrate client supply chains with existing or new enterprise resource planning (ERP) solutions.

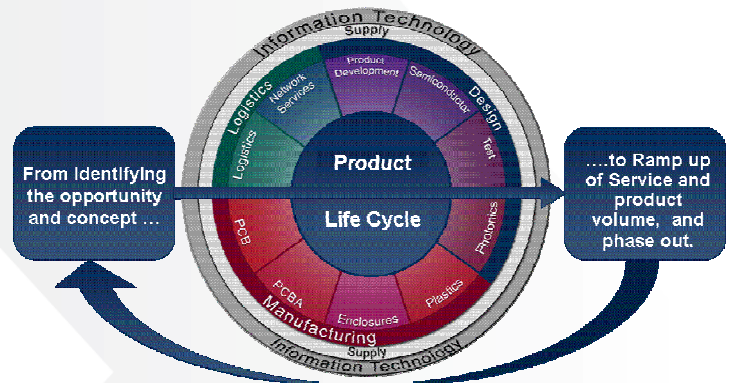

•**Logistics** - we work with clients to implement new technologies in warehousing, transportation and reverse logistics that result in cost reductions and improved customer service.

•**Product Lifecycle Management** - we design, build and maintain SCM processes, which support design and product innovation processes, while potentially reducing costs, increasing quality and shortening development cycles.

•**Procurement** - we improve procurement operations to achieve better prices, greater efficiency, tighter spend control and improved service levels.

•**Supply Chain Operations** - we realize operational improvements across the supply chain to enable cost reduction, cash flow gains and greater efficiencies.

Management of the FLEXLogistics Life Cycle requires the integrated efforts of all business segments and the customer.

FLEXLogistics optimises *Time-to-Market* and manages the *Customer Relationship* through a
